ABSTRACT

This paper summarizes information reported by states for the 1984-1985 school year on supply of and demand for personnel necessary for implementation of the Education of the Handicapped Act. Following a narrative section which synthesizes the statistics, tables give data for numbers of teachers needed and employed, broken down by handicapping condition and divided among 55 states and insular areas. Forty-seven percent of special education teachers provided services in special classes, 37% in resource rooms, 13% in itinerant consulting environments, and 3% in home-hospital environments. Demand data indicate that teachers are needed in almost exactly the same proportion in each setting as those in which they are currently employed. Tables also give similar data for school staff other than special education teachers. (PB)

Information on Personnel Supply and Demand

NINTH ANNUAL REPORT TO CONGRESS ON THE IMPLEMENTATION

OF THE EDUCATION OF THE HANDICAPPED ACT [Public Law 94-142], 1987.

SUMMARY OF INFORMATION ON THE SUPPLY OF AND DEMAND FOR PERSONNEL

Reporting Data on the 1984-85 School Year

Annual reports to the U.S. Congress, prepared by the Office of Special Education and Rehabilitative Services, present a wide variety of data on the status of special education in the states and as a national aggregate. Among these data are reports on numbers of teachers and other personnel employed and needed.

The information in this paper is from the Ninth Annual Report to Congress. It refers to personnel issues for the 1984-85 school year. Text and tables are taken from the report, and table numbers reflect the tabular sequence in the report itself.

CITATION

Programs. (1987). Ninth annual report to Congress on the implementation of the Education of the Handicapped Act.

NINTH ANNUAL REPORT TO CONGRESS ON THE IMPLEMENTATION OF THE EDUCATION OF THE HANDICAPPED ACT, 1987

Office of Special Education Programs and Rehabilitative Services U.S. Department of Education

SUMMARY OF INFORMATION ON THE SUPPLY OF AND DEMAND FOR PERSONNEL

IN 1984-85, states gathered data on the numbers of personnel employed and needed to fully serve children with handicapping conditions in the schools.

- * The total number of special education teachers and speech pathologists employed in that year was 274,519. This total represents increases in the categories of mental retardation, learning disabilities, emotional disturbance, multihandicapped, speech impaired, deafness, and other health impaired.
- * The numbers of teachers employed to serve children in each of the following categories declined from the previous year: orthopedically impaired, visually handicapped, and deaf-blind.
- * The number of additional teachers and speech pathologists needed for full service was reported to be 22,852. The greatest number of teachers were needed to serve children identified as having learning disabilities, mental retardation, emotional disturbance, or speech/language impairments. Those categories of handicapping conditions reporting the highest proportions of teachers needed, relative to teachers presently employed, were: emotionally disturbed, other health impaired, visually handicapped, deaf, and deaf-blind.
- * There were 219,737 personnel other than special education teachers and speech/language pathologists employed to serve children with handicaps in the schools.
- * An additional 8,144 personnel other than teachers were reported as being needed to meet the educational needs of children and youth with handicaps. Teacher aides constituted the largest number of support personnel needed. The highest proportions of support personnel needed, relative to the numbers presently employed, were: physical therapists and occupational therapists.
- * Although the numbers of special educators and other needed support personnel increased over the previous year, shortages of at least 5 percent were reported for all categories of special education teachers, and shortages of from 2 to 12.7 percent were reported for other personnel in special education.

PERSONNEL EMPLOYED AND NEEDED

To meet the goal of providing free and appropriate educational opportunity to all handicapped children, trained personnel are needed to serve this population. This section provides numbers of special education teachers and other

personnel employed and needed by states in school year 1984-85 and compares these data with numbers collected previously. This information differed in several ways from information collected previously.

First, counts of special education teachers were collected by the setting in which the teachers provided services. For school year 1984-85, states reported separate counts of teachers employed and needed in separate classes, resource rooms, itinerant/consulting positions, and home-hospital settings. (See Tables EDI and TD2.)

Second, as in previous years, special education teachers were reported in full-time equivalency (FTE) of assignment and were categorized by the handicapping condition of the children they served. Unlike previous years, counts of noncategorical teachers, working teachers with children of different handicapping conditions, were not collected separately. Instead, the time teachers worked was apportioned and counted according to the handicapping condition served.

Third, the categories of personnel other than special education teachers who serve handicapped children were modified. Data requirements for school year 1984-85 called for counts of counselors and state education agencies (SEA) supervisors/administrators, counts that were not previously collected separately. Also, counts of speech pathologists were not collected separately; these counts were included with those of teachers of the speech or language impaired. The remaining categories of personnel were unchanged.

Finally, states were for the first time required to provide two sets of information on the number of personnel needed. For one set of data, states were to provide counts of personnel needed for the 1984-85 school year. Included in these figures were:

- * The number of vacancies that occurred from July 1, 1984, through February 1, 1985, even if they were subsequently filled; and
- * The number of additional personnel who were needed from July 1, 1984, through February 1, 1985, to fill positions occupied by persons who were not appropriately and adequately prepared or trained. (For this second set of data, states were to provide counts of additional personnel needed to provide improved services.)

States reported that the number of special education teachers employed increased between 1983-84 and 1984-85. In comparisons of data for these years, counts of speech pathologists were added to counts of special education teachers for 1983-84 to make these data comparable to those for 1984-85. With this adjustment, the number of special education teachers increased from 268,629 to 274,519, an increase of 2 percent. Although counts of special education teachers were reported according to teaching environments for 1984-85, responses to OSEP's follow-up effort indicated that these counts were comparable to counts collected previously; i.e., counts of home-hospital teachers were typically subsumed under the total special education teacher counts.

For the 10 handicapping conditions served by special education teachers employed, seven categories increased in the number employed from 1983-84 to 1984-85, while three categories decreased. The number of teachers employed increased for

Supply-Demand/#17

the following handicapping categories: mentally retarded, learning disabled, emotionally disturbed, multihandicapped, speech impaired, hard of hearing and deaf, and other health impaired. The number of teachers employed decreased for the following categories: orthopedically handicapped, visually handicapped, and deafblind.

Generally, for the 1984-85 school year, the increases and decreases in the numbers of special education teachers employed, by category, did not correspond to changes in counts of children served by handicapping conditions. For example, the increase in the numbers of teachers of the mentally retarded was accompanied by a decrease in the number of students reported in this category. This may be related to the elimination of the noncategorical option from the reporting form and changing definitions and policies at the state level in 1984-85.

The data show reduced numbers of special education teachers in some handicapping categories during 1984-85; however, 53 states and insular areas reported that 22,852 additional teachers were needed to fill vacancies and replace uncertified staff. As shown in Table 11, the categories of special education teachers reported by states as the most needed paralleled the relative prevalence of handicapping conditions. Specifically, states reported that the greatest proportional increase needed was for teachers to serve learning disabled, mentally retarded, emotionally disturbed, and speech or language impaired students. These four categories accounted for 84 percent of all teachers needed and for 93 percent of students served under Chapter 1 of ECIA (SOP) and EHA-B. Twelve percent of the teachers were needed for the other health impaired, hard of hearing and deaf, and multihandicapped, while 5 percent of all students served were so categorized. Teachers needed to serve visually handicapped, orthopedically impaired, and deafblind together constituted less than 3 percent of all teachers needed, while 2 percent of the students served had these handicapping conditions.

The total number of personnel other than special education teachers employed increased between 1983-84 and 1984-85. In making comparisons between these two years, counts of speech pathologists were omitted from the 1983-84 data because these counts were not collected separately in 1984-85. Also, counts of counselors were omitted from the 1984-85 figures because, based on responses from OSEP's follow-up effort, most states did not report counselors for previous years. Counts of SEA supervisors/administrators, however, were included because most states, again according to OSEP's follow-up, subsumed this count within other personnel categories in previous years. The adjusted totals for numbers of personnel other than special education teachers employed were 205,517 in 1983-84 and 219,737 in 1984-85, an increase of 7 percent.

Categories of personnel employed that increased over the two years included: teachers' aides, psychologists, school social workers, diagnostic staff, occupational therapists, physical therapists, audiologists, and recreational therapists. The category of supervisors/administrators, labeled simply supervisors in 1983-84, also increased. The states and insular areas reported 925 SEA supervisors/administrators employed. Of personnel other than special education teachers, fewer physical education teachers, work-study coordinators, and other non-instructional staff were employed in the 1984-85 school year than in 1983-84.

Fifty-five states and insular areas indicated that an increase of 8,144 staff in all categories of personnel other than special education teachers was needed to fill vacancies and replace noncertified staff in 1984-85. Table 13 shows this

need relative to the number employed for each category. In proportion to the number of personnel employed, physical therapists and occupational therapists were the most needed personnel, followed by SEA supervisors/administrators.

Based on the responses received from 55 states and insular areas, most special education teachers (47 percent) provided services in special classes. Thirty-seven percent of special education teachers provided services in resource rooms. In the remaining two environments, itinerant/consulting and home-hospital, 13 percent of special educators provided services in itinerant/consulting environments and 3 percent in home-hospital environments.

Responses from 53 states and insular areas indicated that 47 percent of personnel needed to fill vacancies and replace noncertified and nonlicensed staff were needed for special classes. Thirty-nine percent were needed to provide services in resource rooms. Finally, 12 percent were needed to provide services as itinerant/consulting teachers and 2 percent as home-hospital teachers. These data indicate that teachers are needed in almost exactly the same proportions in each setting as those in which they are currently employed.

The tables on the following pages present state-specific information on special education teachers and other school staff employed and needed in 1984-85 to serve children with handicapping conditions.

This document was prepared pursuant to Grant No. GC087C3053-88 with the US. Department of Education Office of Special Education and Renophilative Services Agencies underdxing such projects under government spansorship are encouraged to express their ludgment theirly in professional and technical matters. Points of view or applicable to not therefore necessarily represent official Department of Education position or pointy.

BIST COTT AVAILABLE

Number of Special Education Teachers Employed and Needed by Handicapping Condition During School Year 1984-852/

Handicapping Condition	Employed	Needed	Percent Needed as 2 Percent of Employed	Percent of Total Needed
Learning Disabled	102,395	7,800	7.6	34.1
Mentally Retarded	61,832	4,671	7.6	20.4
Emotionally Disturbed	32,027	4,322	13.5	189
Speech or Language Impaired	36,612	2,511	6.9	110
Hard-of-Hearing and Deaf	7,992	773	9.7	3 4
Multihandicapped	8,637	618	7.2	2.7
Orthopedically Impaired	4,240	243	5.7	1.1
Other Health Impaired	10,445	1,299	12.4	5.7
Visually Handicapped	2,995	296	99	1.3
Deaf-Blind	396	38	9.6	0.2
Total teachers 2/	274,519	22,852	8.4	98.8

- Personnel needed included:
 - (1) number of vacancies that occurred; and
 - (2) number of additional personnel needed to fill noncertified or nonlicensed staff.
- The number of total teachers does not equal the sum of teachers by handicapping condition because the total includes counts of teachers not categorized by the States by handicapping condition. Percentages are based on data provided by handicapping condition; that is, the total number employed is 267,571 and the total number needed is 22,571.

Number of Special Education Personnel Other Than Teachers
Employed and Needed During School Year 1984-852/

Type of Personnel	Employed	Needel	Percent Needed of Employed	Percent of Total Needed
Teacher aides	112,330	4,086	36	50.2
Other non-instructional staffk/	39,593	835	2.1	10.3
